DeepFX™ | ActiveFX™
Amazing results in a single session

Why DeepFX™ | ActiveFX™?

Improve deep wrinkles, fine lines,
tone and texture – in one single treatment

Get amazing rejuvenation results
without surgery

Experience minimal downtime

What should I expect?

When will I see results?

The main advantage of DeepFX™ and ActiveFX™ is that results are visible after **one single treatment**. As your skin heals following the treatment, you will begin to notice an improvement in wrinkles, fine lines, tone and texture. Typically, you should expect to continue to see improvement for up to 18 months following the procedure.

What can I expect after treatment?

Immediately following treatment, your skin will be warm and may be slightly red and swollen, depending on your customized treatment settings. Most patients are able to resume their daily activities within a week. To support you in the healing process, a daily skincare routine should be prescribed.

What is it?

The total skincare solution

DeepFX™ | ActiveFX™ are two fractional resurfacing solutions of the UltraPulse® and AcuPulse™ systems. With DeepFX™ | ActiveFX™ your physician can offer you amazing results on a range of skin aging concerns, from **deep wrinkles** to **fine lines** and **uneven skin tone and texture**. DeepFX™ and ActiveFX™ affect different layers of your skin, depending on your specific concern.

Is it right for me?

Lumenis® CO₂ laser procedures are not suitable for everyone, for example patients who have taken Accutane® (isotretinoin) within the past 6-12 months, or had a history of keloid formation. Risks may include change of pigmentation, infection, redness, textural changes or scarring. Be sure to consult your physician regarding treatment options available and related contraindications and risks based on your individual concerns and medical history, before choosing a treatment.

How does it work?

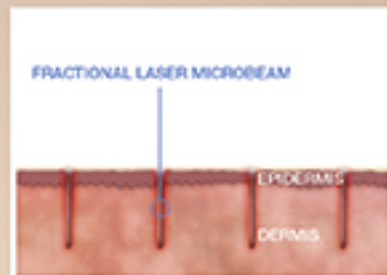

DeepFX™ | ActiveFX™ technology

The Lumenis® fractional laser creates microscopic channels that trigger the process of new collagen and elastic fibers production, while leaving some unaffected skin in between the channels to reduce healing time. The result is deep dermal regeneration that dramatically improves your skin elasticity and appearance.

The unique power and precision of Lumenis® technology enables your physician to customize treatments for your specific skin concerns and needs, with optimal comfort and healing time.

The treatment

To minimize discomfort during deeper treatments, a local anesthetic should be applied to numb your skin. Depending on the treatment area, you can expect the session to last approximately 20-30 minutes. During the treatment you may feel a warm sensation as the laser is applied but you should not feel any discomfort.

Microbeams target the dermal layers of the skin, resulting in deep dermal regeneration. Unaffected skin in between reduces healing time and aids in regeneration.

A high-energy laser beam is applied in a fractional pattern over the surface of the treatment area, leaving areas of untouched skin to promote quicker healing.
